

ABS File & Folder® Data Sheet

OFFSITE DATA PROTECTION

ABS File & Folder provides efficient offsite data backup and recovery with secure storage at the ABS offsite infrastructure. ABS Server® and ABS Workstation® enable automated data protection processes for servers, desktops and laptops.

How it Works

An agent is installed on the targeted servers and workstations. The initial complete data replication occurs. From here, new files and changes to files are identified for transmission. Files are encrypted during backup, transmission and storage using industry leading 256-bit AES encryption.

For additional protection, the solution uses a Secure Socket Layer (SSL) to establish a private communication path to the ABS offsite storage facilities. A second copy is sent to an ABS Replication DataVault located 3,000 miles away, ensuring maximum redundancy.

ABS SERVER

ABS Server provides advanced file and folder data protection for a single server or multiple servers through one, easy to manage account. ABS Server enables centralized management and control of backup operations.

The solution may be installed on an unlimited number of machines. Pricing is based on data size after compression for the total storage amount across all protected servers.

ABS WORKSTATION

Provides protection for files and folders residing on individual desktops or laptops within the company. Pricing is based on data size after compression for each individual workstation and billed on the cumulative number enrolled.

KEY BENEFITS

- Provides reliable backups and efficient data recovery for files and folders
- Automatically moves data offsite to redundant facilities
- Securely stores data with long term history that you define
- Enables small businesses to establish base level business continuity practices
- Removes the costs, hassles and human error associated with tape backup

SYSTEM REQUIREMENTS

ABS Server

- Windows 2012 / 2008 R2 / 2008 SP2 / 2003 R2 / 2003 SP2 / 2000 SP4
- Windows SBS 2011 / 2008 / 2003 R2 / 2003
- Windows 8 / 7 / Vista / XP SP3
- Memory: 512MB
- Disk Space: 250MB

ABS Workstation

- Windows 8 / 7 / Vista / XP SP3
- Memory: 512MB
- Disk Space: 250MB
